

Task #1: Clean the data (remove duplicates, fix dates), then summarize total sales by product category.

Task #2: Run a check on this data file and report which columns have missing values and how many. Flag any that are missing.

Task #3: Visualize monthly revenue trends from this sales file.

Task #4: Based on the orders dataset, write about what you notice regarding customer behavior.

Task #5: Are there any unusually large or small orders that may need to be double-checked?
